1 Preamble

This package is destined to whoever needs it. It is freely available and if you want to, you can modify it and share it (share not sell!). It is licensed under the CC-BY-NC-SA license.

2 Include the package

\usepackage{infoBulle}

3 Defined commands

This package mainly define four commands:

- \normalInfo{<Title>}{<Text>}
- \warningInfo{<Title>}{<Text>}
- \criticalInfo{<Title>}{<Text>}

Which results in this:

4 Customization

It is possible to define new infoBulle (here levelInfo) using the following syntax (before \begin{document}):

\ makeatletter

 $\label{level-some properties corresponding to the mdframed package of the mdframed package of the level of the mdframed package of the level of the mdframed package of the level of the$

\makeaatother

The mdfdefinestyle is a command from the mdframed package that allow you to define every frame property. Personally I solely use this to define the line color (linecolor=red)

The infoBulleSkeleton command take four inputs:

- A mdframed style (level in our example)
- An image contained in the folder defined with the \pathToImages command
- A title

• Some content
